Descripción del puesto/funciones:

If you have in-depth Quality knowledge, analytical strengths and project management skills, then combine them in this high-profile Quality Engineer role with BD, a global leader in Medical Technology.

Permanent

Almaraz

Our Almaraz facility is home to approximately 100 associates and specialises in the production of I.V sets, Extension lines, Accessories.

As a Quality Engineer reporting to our Quality Representative, you'll perform activities in the Quality System environment, and in the Regulatory affairs area.

That'll involve participating in the implementation and maintenance of the Quality System, with all task that this activity supposes. Additionally, you will participate in other tasks that any regulatory issue requires.

In addition to keeping the Technical Documentation up to date as required by MDD 93/42/CEE, your other key Quality Engineer responsibilities include:

Prepare plans/protocols for different purposes

Execution of protocols when required

Write final reports when required

Update SWI/SOP when required, with all derivative activities that this requires

Collaborate validating product/process

Attending to NB audits/Corp. Audits

Perform/Collaborate internal audit

Educated to University Degree in Engineering, you have at least 1 year experiencing Quality System matters within manufacturing.

You have a good level of spoken English and Preferred internal auditor training.
